- ➔ Top 10 Telecommunications company by Inc. 500/5000

OUR MISSION

Accelerate our customers' network and business transformation through innovation in network delivery and data insight.

FOCUSED PRACTICE AREAS

The Nexus services organization is comprised of four core practice areas, each bringing a specific expertise and a portfolio of services to our clients.

TECHNOLOGY SERVICES

Nexus collaborates with service providers to leverage emerging technologies to its full potential—evolving networks, applications, data centers, and devices to support automation and open implementations. Applying our comprehensive experience with a wide range of technologies, Nexus plans, implements, executes, and optimizes network infrastructure transforming the network for long-term success.

NETWORK ENGINEERING

Nexus fully supports clients with the expertise they need to plan and optimize networks regardless of technology. Understanding the impact on capital investment, operational expense, and overall performance, providing recommendations that are flexible and robust – meeting both immediate needs and future contingencies.

NETWORK DEPLOYMENT

Network Operators partner with Nexus for its continuous, ahead-of-the-curve innovation and progressive approach to building wireless and wireline networks that advance schedules, reduce costs and increase quality of service. Our delivery teams leverage state-of-the-art software and automation tools providing unequaled consistency, accuracy and visibility.

SOFTWARE & BUSINESS INTELLIGENCE

Nexus take a value-based approach to designing software solutions. With a complete understanding of both raw technology and direct industry experience, we are uniquely positioned to maximize the business value of every implementation. Nexus has created optimized data mining techniques that predict customer demand for wireless services and then provide advanced network management solutions to reliably and dynamically support customer data needs.
